Review Problems

CS 340, Fall 2020

These problems are selected from the back of your text book:

1. Pre-Midterm problems:
   (a) 1.1 - 1.8 (all the problems)
   (b) 2.1 - 2.8 (all the problems)
   (c) 3.2, 3.4 - 3.12
   (d) 4.1 - 4.22, 4.25 - 4.28
   (e) 5.1 – 5.6. Challenge: 5.7

2. Post-Midterm problems:
   (a) 6.1 – 6.11, 6.15 – 6.17, 6.19 – 6.21, 6.24, 6.26
   (b) 7.1 – 7.15 (later problems also reasonable, but more challenging)
   (c) 8.1 – 8.20 (again, later problems potentially more challenging)
   (d) 11.1 – 11.5, 11.9 – 11.11

Do not do the problems in order - the problems in the book are structured to cluster, e.g., there are a bunch of problems in a row in chapter 4 that are all related to interval scheduling. You’ll need to skip ahead in the list to look at some problems related to Dijkstra’s algorithm, etc. However, note also that the higher numbered problems are generally harder.
